Art Unit: 2622

1. This application is in condition for allowance except for the following formal matters:

a) The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed;

b) Figure s 24 and 25 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2622

Tanimoto (US 2006/0050145 A1) discloses an imaging device that can transmit image signals to via an antenna.

Shikii (US 2007/0066868 A1) discloses a capsule endoscope that includes a radio transmitting/receiving circuit.

Seaman et al (US 2004/02011685 A1) discloses a digital camera that includes a transceiver.

Akutsu et al (2004/0208490 A1) discloses a video camera that comprises a communication interface to be used to transmit image data to a Network.

3. Claims 1-11 are allowed.

The prior art of record fails to suggest or disclose:

With regard to claim 1, an optical sensor unit comprising a plurality of radio optical sensor means each including an optical sensor and a radio element for transmitting and receiving of an information through communication with the optical sensor to and from an outside by radio and an electromagnetic wave for supplying energy for photographing by the optical sensor and radio transmission and reception by the radio elements; and each of the radio optical sensor means receives the electromagnetic waves and transmits photographing information of a subject from the optical sensor to the radio communication means through the radio element.

Art Unit: 2622

With regard to claim 9, an optical sensor array comprising a plurality of radio optical sensor means each including an optical sensor and a radio element for transmitting and receiving of an information through communication with the optical sensor to and from an out side by radio, wherein an electromagnetic wave as a signal for requesting transmission of photographing information and an electromagnetic wave for supplying energy for photographing by the optical sensor.

With regard to claim 10, a method of driving an optical sensor comprising arranging a plurality of radio optical sensor means independently of one another, which each include an optical sensor and a radio element for transmitting and receiving of an information through communication with the optical sensor to and from an outside by radio and an electromagnetic wave for supplying energy for photographing by the optical sensor and radio transmission and reception by the radio elements; and receiving from each of the radio optical sensor means the electromagnetic waves and transmitting the photographing information of a subject from the optical sensor to the radio communication means through the radio element.
